Agency leadership | Ohtani's Dodgers contract

Exceptional output. A commercial opportunity to value.

An opportunity case for agency leadership

Assess the Dodgers salary commitment against an alternative roster.
Combine baseball contribution with attributable club commercial contribution.
Evidence cutoff: October 13, 2026. Original-decision DCF: December 31, 2023.

Performance earns the first slide

The baseball case has measurable substance.

- 2024 regular season: 54 home runs, 59 steals, 1.036 OPS.
- 2025 regular season: 55 home runs, 1.014 OPS; 47 pitching innings.
- Unanimous NL MVP in 2024 and 2025.
- Output supports the sporting case; it does not calculate club profit.

Commercial evidence | name the recipient

Documented club partnerships expand the opportunity.

- ANA announced a multiyear Dodgers partnership in April 2024.
- UNIQLO announced a Dodgers partnership in March 2026.
- The announcements establish agreements, not fees or sole Ohtani causation.
- Player agreements and club agreements have different recipients.

Demand indicators | keep their limits

Attention is evidence to investigate.

- Ohtani led MLBShop.com Nike jersey sales in the reported 2024 period.
- No purchaser geography, dollar proceeds or retained profit was disclosed.
- Forbes estimated $125m worldwide off-field earnings for May 2025 to May 2026.
- That estimate belongs to the athlete and is not U.S.-only or Dodgers income.

Contract | three different measures

$700m is the nominal player commitment.

Contract payment timing

- Reported player payments: $2m annually in 2024-33; $68m annually in 2034-43. USD.
- Reported CBT payroll charge: approximately $46m annually. Funding reserves and CBT cash tax are separate.

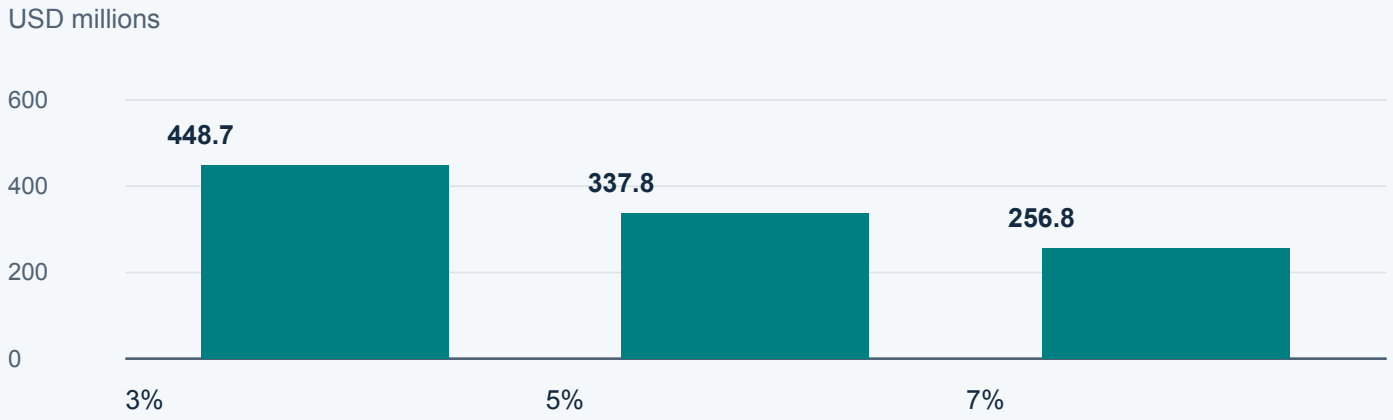

Illustrative calendar-year-end timing; 2024-2033 service, 2034-2043 deferred payments.

[MLB1] www.mlb.com

Original-decision model | show the date

Payment PV depends on the assumed discount rate.

Original-decision salary-payment DCF

- December 31, 2023 illustration: nominal pretax USD, year-end payments; discount rates are assumptions.
- Salary-payment model excludes CBT cash tax, funding liquidity and other club costs; not today's liability.

Illustrative value at Dec. 31, 2023. Excludes CBT cash tax, alternative roster costs and other club cash flows.

[MLB1] www.mlb.com

Deferral | cash timing needs a second view

A $2m player payment is not the full annual burden.

- CBA funding rules require present-value funding by the second July 1 after the earning season.
- Actual reserve balances and funding records were not obtained.
- Reserve allocations and later player payments must not become two compensation costs.
- Model liquidity separately from the player-payment DCF.

Club sensitivity | assumptions drive the answer

Receipts must become attributable retained contribution.

HYPOTHETICAL GROSS RECEIPTS	ASSUMED ATTRIBUTION	ASSUMED RETAINED MARGIN	ANNUAL CONTRIBUTION
$100m	**50%**	**40%**	**$20m**
Invented scenario	Invented scenario	Invented scenario	Invented scenario

Result: $20m annual contribution; $154.4m ten-year PV at 5%.
That is $183.4m below modeled salary-payment PV before other club effects.

[FRED_MODEL] finance.json

Soto comparison | normalize before ranking

Different commitments need a common valuation basis.

Player	Term / nominal USD	Payment structure
Ohtani	10 years / $700m	$2m annually 2024-33; $68m annually 2034-43
Soto	15 years / $765m	No deferrals; conditional opt-out after year five

Normalize valuation date, cash timing, duration, option scenarios and expected contribution before comparing.
Value retained club contribution and roster alternatives against compensation, marginal CBT tax and other incremental costs.
Headline totals do not establish net breakeven or a best-ever ranking.
